

Cancer Screening Change Package (CSCP)

CPCRN Annual Meeting
January 22, 2021

CSCP Purpose

The **purpose** of this project is to develop an online technical package, the **Cancer Screening Change Package (CSCP)**, to empower health providers, public health practitioners, and community leaders to improve cancer screening.

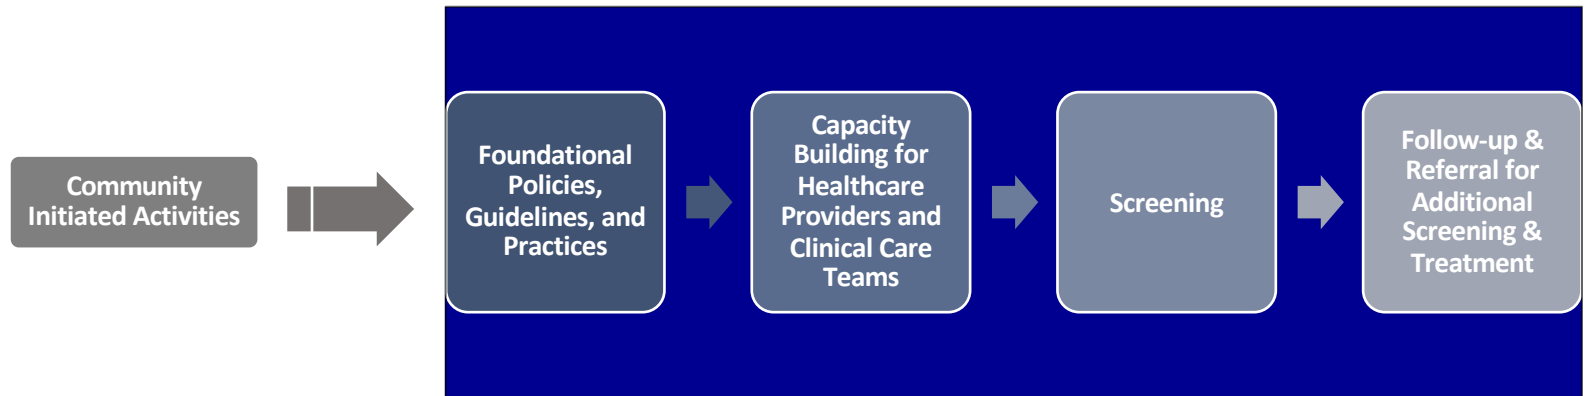

What is a Change Package?

- Change packages serve as a **menu of options** from which healthcare professionals in health care settings and public health professionals who partner with them can select **tools and resources** that **improve the processes for cancer screening**.
- CSCP expands this traditional model to also include a **community-based component** that **supports community-clinical linkages** to increase utilization and access to facilities offering cancer screening.

CSCP Focus

The CSCP is broken down into five focus areas:

Six cancer screenings that the USPSTF has given an A, B, or C rating:

- BRCA-related, breast, cervical, colorectal, lung, and prostate

CSCP Focus on Health Equity

The CSCP takes into consideration **social determinants of health** by including change concepts and change ideas to improve the processes used to:

- Strengthen community-clinical linkages
- Reduce economic barriers
- Improve community-initiated activities

Included strategies and actionable ideas are intended to raise **awareness, access, and utilization of cancer screening services** according to USPSTF recommendations.

CPCRN Scope of Work

Conduct an environmental scan

Create a tracking mechanism

Review potential tools and resources

Complete an environmental scan report

CPCRN Involvement – Staff and Advisors

CSCP Investigator/Staff	Role
Jennifer Leeman	Principal Investigator
Catherine Rohweder	Co-Investigator
Lindsay Stradtman	Research Associate
TBD	Student Research Assistant
Advisory Committee	CPCRN Collaborating Center
Natoshia Askelson	University of Iowa
Cam Escoffery	Emory University
Sue Heiney	University of South Carolina

CPCRN Involvement – SMEs & Reviewers

Subject Matter Experts

- 12 CPCRN investigators
- Interviews about cancer screening tools/resources

Reviewers

- 5 CPCRN investigators
- Review cancer screening tools/resources to determine best ones for inclusion in CSCP

Timeline (Nov 2020 – Jul 2021)

Task	Status	Expected Completion Date
SME interviews	In progress	February 2021
Database development	In progress	February 2021
Scoping review	Not started	May 2021
Review process	Not started	June 2021
Environmental scan report	Not started	June 2021

CPCRN Requests

- Recruitment of Subject Matter Experts
 - Two BRCA-related experts
- Recruitment of Reviewers
- CSCP Dissemination
 - Community partners
 - Other research networks
 - Social media
